

# PVC cling film production line: the actual role of PVC cling film

Detail Introduction :

Use plastic wrap to lose weight.

Use plastic wrap to remove oil.

PVC cling film is not suitable for food preservation, so many people think that this kind of cling film is not good, but it is not the case. In many aspects of life, PVC cling film is still instrumental. In the following content, we will specifically introduce the practical application of PVC cling film.

Use plastic wrap to lose weight.

Women who lose weight may have used this method to wrap plastic wrap on the parts that need to be wrapped during exercise. Although some people would suspect that this was only a short-term loss of water, some people proved that it was effective. A personal trainer said that the main reason PVC cling film can lose weight is to use its lower air permeability to increase the heat in various parts of the body sharply, which causes sweating of sweat and burns fat and finally achieves the effect of weight loss.

Use plastic wrap to remove oil.

Housewives all know that the biggest trouble in the kitchen is when removing oil. Mainly wipe the cooking hood and wipe the kitchen tiles, which are all greasy. But if plastic wrap can be used, it can be removed easily. Usually, we can put some plastic wrap on the stovetop in the kitchen and the side of the range hood. In addition to the cooking fume, many of the oily fumes are still in the kitchen. The top of the stove is the place to concentrate on. Putting a plastic wrap on it can save a lot of cleaning effort. Just change the plastic wrap and tiles frequently. I can keep it in vain.

In addition to the above two methods, PVC cling film can also be used to prevent dust. The main thing is to wrap plastic wrap on the equipment that you frequently use to achieve the effect of dust prevention. It seems that the plastic wrap that has been "abandoned" by food still has many uses. Has everyone learned the above methods?
